# Generative AI Declaration

## Exercises 4–6

**Student name:** Quang Nguyen Duy

**Student ID:** 104992981

**Course:** COS30045 - Data Visualisation

**Submission date:** 31/10/2026

## Declaration

I declare that generative artificial intelligence was used while completing Exercises 4-6 as a learning, development, debugging, and documentation assistant. It was not used as a replacement for my own understanding, decisions, testing, or responsibility for the submitted work.

The work in this folder covers:

- SVG drawing and layout in Exercise 4.1
- HTML, CSS, JavaScript, and D3.js appliance-energy web pages in Exercises 4.2–4.7
- D3.js bar, line, and donut charts using television energy, technology, electricity-price, and screen-size data in Exercises 5.1–5.3
- KNIME workflows and D3.js visualisations for TV energy-consumption distributions in Exercises 6.1–6.4
- filtering, tooltips, histograms, and scatterplots for interactive visual analysis

AI assistance was used for:

- explaining HTML, CSS, JavaScript, SVG, D3.js, and data-visualisation concepts
- suggesting ways to structure pages, charts, scripts, and supporting documentation
- helping diagnose and correct implementation errors
- discussing chart scales, labels, interactions, accessibility, and responsive layout
- improving the clarity and grammar of technical text
- preparing this declaration and the project README files

I remained responsible for confirming the datasets, implementing and configuring the workflows and web pages, running the code, checking visual outputs, interpreting the data, testing interactions, and deciding which suggestions were appropriate. I reviewed and adapted AI-generated suggestions before using them and did not assume that generated content was correct.

I understand that generative AI can produce inaccurate, incomplete, or unsuit-able code and explanations. I accept responsibility for the accuracy, originality, academic integrity, and final presentation of this submission.

## AI tools used

| Tool | Purpose |
|---|---|
| **ChatGPT & Github Copilot** | **Debugging, chart development, and documentation** |

## Example prompts or interactions

Examples of the types of prompts used were:

“Explain how to create and label an SVG or D3 visualisation.”
“Help debug this JavaScript or D3.js chart and explain the error.”
“Suggest an accessible and responsive structure for this data-visualisation page.”
“Improve the clarity of this README or technical explanation without changing its meaning.”
